Yun Ei Hlaing

San Jose, CA | (805)-329-2467 | yuneihlaing14@gmail.com

EDUCATION

MS, Artificial Intelligence
San José State University, San José, CA | **GPA: 3.7**
BS, Computer Science
California Polytechnic State University, San Luis Obispo, CA | **GPA: 3.8**

PROJECTS

3D Brain Tumor Segmentation — PyTorch, MONAI, Docker, Streamlit Aug 2025 – Dec 2025

- Developed an end-to-end MRI brain tumor segmentation system using knowledge distillation, compressing SegResNet and SwinUNETR into efficient UNet-based models on the BraTS dataset
- Trained and optimized teacher and student models for 20 epochs, with distilled student models closely matching teacher performance (0.66 vs 0.60 Dice Score)
- Implemented an inference pipeline using Docker, Ray Serve and Streamlit for scalable deployment and real-time model inference

NBA Game Outcome Predictor — Machine Learning Jan 2025 – June 2025

- Built machine learning pipeline using XGBoost and Random Forest to predict NBA game winners based on historical team statistics and engineered features such as ELO ratings and win streaks.
- Optimized through feature selection (backward elimination) and hyperparameter tuning (Grid Search), model achieved 68.5% accuracy and ROC-AUC score of 74.4%.

Music Recommendation System — AI and Machine Learning Jan 2025 – June 2025

- Implemented a music recommender offering both diverse and similar music recommendations based on user-selected songs, user emotions and lyrics similarity
- Applied K-Means clustering and K-Nearest Neighbors models with a MiniLM sentence transformer for analyzing semantic content, PCA dimensionality reduction and an emotion classification model via XGBoost (96.7% accuracy).

GradPlanner — React (Node.js, Express.js, AWS) June 2023 – June 2024

- Project goal was to provide a user-friendly, interactive platform for Cal Poly students to plan their academic journey.
- Designed Figma prototype, displaying timeline through JavaScript tree structure charts (Treant.js).
- Gathered data using Python web scraping techniques and integrated it with AWS SQL database for data processing.

Task Time — React (Node.js, Express.js, MongoDB) Apr 2022 – June 2022

- Worked in a team to build a To-do list website that focuses on organization and prioritization of daily tasks.
- Implemented the edit and delete functions for user modification of the list.
- Reviewed team's code for errors and to provide additional perspective.
- Applied practices such as Test-Driven Development, Scrum, Continuous Integration and MVC for project management.
- Tested backend functions through Jest and finished the project with 100% test coverage.

WORK EXPERIENCE

CommUniverCity— (cucsj.org) Jan 2025 – Dec 2025
Project Coordinator/Website Designer

- Designed and managed WordPress site structure, outreach materials and page optimization for CommUniverCity, a non-profit initiative dedicated to strengthening neighborhood outreach and community development
- Coordinated with professors, San José community partners and city officials, and succeeded in strengthening visibility and support for future funding and investment opportunities

EvoXLabs — (unlockedmaps.com) June 2022 – Mar 2024
Software Engineer Intern/Project Lead

- Contributed to the website 'Unlocked Maps' that provides users with information on the accessibility of urban rail transit stations, through interactive maps and real-time reports of elevator outages.
- Led a team of three in onboarding Tokyo stations, collected backend data through web scraping and conducted research.
- Participated in website development and UI design improvements in weekly meetings.

SKILLS

AI/ML: PyTorch, Tensorflow, Python, SQL, Pandas, scikit-learn, **Full-Stack**: JavaScript, CSS, HTML, React, RESTful APIs, Git, AWS, Docker, Streamlit

ACTIVITIES

Content Creation Officer, AI & ML Club @ SJSU, **Member** SWE @ Cal Poly, **Volunteer,** CommUniverCity
Club Officer, SHPE, San Diego Mesa College
